

Notification to: MG2 and MG3 Series Power Supply Customers
From: John M. Carroll Director, AC-DC Marketing
Subject: MG2 and MG3 Series End-Of-Life Notice
Date: February 12, 2008

This letter is to inform our customers that we will be ending the manufacturing life cycle of both the MG2 series and MG3 series of products from Power-One Inc. (formerly produced by Magnetek). Due to lack of availability of components/PCBs, costs of supporting supplier chains, and the diminishing volumes of these models, it is no longer economically feasible for Power-One to produce these models. The following will apply:

Series	EOL Date	LTB Date	LTB MOQ/MSQ	LTB Terms
MG2 (all models, variants, modules and components)	Immediately	N/A	N/A	No last time buy.
MG3 (all models, variants, modules and components)	1-Jun-08	30-May-08	200	25% price increase over 2007/2008 pricing levels; Orders will ship ASAP and at Power-One's discretion.

In order to afford your organization time to make transition arrangements appropriate to your needs, Power-One will be offering a last time buy (LTB) on the MG3 series only. LTB offers are non-negotiable, as is the EOL date, after which orders for these models will no longer be accepted. These last-time-buy orders will be accepted provided component availability and/or other factors do not preclude fulfillment. All products must be shipped as soon as possible following completion of manufacturing, and at Power-One's discretion.

Additionally, as can be seen above, the MG2 series will reach end-of-life immediately effective with this letter. LTBs will not be offered. This is due mostly to inactivity in the purchase and forecast of these models, as well as extremely hardship in obtaining raw materials.

If you have any questions or issues regarding this action, please feel free to contact me or your local Power-One Regional Sales Manager.
